Cableguard™ Elettrometall 8870 Paste

Cableguard™ Elettrometall 8870 Paste is an environmentally friendly alternative to traditional systems for providing corrosion protection on the main cables of suspension bridges. This three-part paste system primarily consists of an elastomeric base and metallic zinc filler.

FEATURES/ADVANTAGES:

- Long term flexibility - Elongation greater than 30%
- Weather resistant - No rusts, cracks or bubbles after 3000 hours in salt spray fog test
- Oil resistant
- Simple installation procedures
- Environmentally superior to traditional cable pastes

INSTALLATION:

- a.) Clean and dry all cable surfaces prior to installation.
- b.) Combine and mix components and let stand for a minimum of 30 minutes (or until proper consistency to allow for application).
- c.) Apply to cable by hand or trowel in one coat.
- d.) Install wire wrap if needed.
