

Structural Bearing Assemblies

Versiflex™ HLMR Pot Bearing Assemblies Uni-Directional PMG Series - 30%

Design Basis: AASHTO 17th Edition w/ Interims – Section 14

Rotation: 0.03 Radians

Horizontal Capacity: 30% of Vertical Capacity

Movement: X = ±0.063"

Y = As shown below

Steel Strength: Fy = 50 ksi

Structural Bearing Assemblies

DESIGN CONSIDERATION

- A. Bearing assembly component dimensions are based on assumed structural conditions and a skew of 0°.
- B. Translational movements (Y) shown in the chart reflect total required structural movement. Bearing components are detailed to accommodate the structural movement plus a ±1" factor of safety.
- C. Sole plates are designed for a welded connection to a steel girder flange. Sole plate dimensions will vary for bolted connections to steel flanges and/or for bearings supporting concrete superstructure elements.
- D. Masonry plate information has been excluded from the bearing details. Masonry plate dimensions are based on the allowable bearing stress of the substructure unit and the anchorage requirements.

A recommended method of determining the masonry plate thickness is to use a 60° load distribution through the plate. The effective loaded area should be used to calculate the bending moment of the plate and the concrete bearing pressure.
